EDUCATION

B.E. Biomedical Engineering
Sona College of Technology
2024 – 2028 | Salem, TN

12th Grade (HSC)
Saraswati Matric School
Year: 2022 | Score: 74.6%

10th Grade (SSLC)
Govt Girls School, Belur
Year: 2021

SKILLS

PROGRAMMING & TOOLS

Python · C Programming · C++ · HTML · Canva · MS Office

IOT & HARDWARE

Arduino · ESP32 · Raspberry Pi · Sensors Interfacing

BIOMEDICAL & AI

Biomedical Instrumentation · Medical Electronics · AI Tools · Medical Coding · Healthcare Tech · Signal Processing · TensorFlow · OpenCV

PROFESSIONAL SUMMARY

Dedicated and analytical Biomedical Engineering undergraduate student (2024–2028) at Sona College of Technology. Focused on integrating advanced technology, specifically Artificial Intelligence (AI) and the Internet of Things (IoT), with clinical medicine. Experienced in smart healthcare systems design, ECG data analysis, and microcontrollers. Committed to building innovative healthcare technology that improves medical diagnostics and enhances patient care systems.

INTERNSHIP

Healthcare Technology Intern
Medsby | Completed

Acquired practical exposure to biomedical engineering systems and clinical protocols:

- Gained hands-on experience with hospital-grade diagnostic and physiological monitoring equipment.
- Studied end-to-end medical technology workflows, from sensor data capture to patient dashboard application.
- Collaborated on conceptualizing systems that bridge clinical practice and hardware technologies.

ACADEMIC PROJECTS

Smart AI-Powered Stethoscope
AI, Biological Signal Processing, Machine Learning

Developed a digital stethoscope concept integrating machine learning classification algorithms to analyze body physiological sounds and identify cardiac murmurs or abnormalities.

AI-Based Drowsiness Detection System
Arduino, Computer Vision, OpenCV

Designed a real-time driver assistance system combining machine learning and computer vision to detect physical fatigue, trigger alerts, and prevent traffic accidents.

Pulse Oximeter using ESP32
ESP32 Microcontroller, IoT Cloud

Built a compact wireless wearable oximeter designed to continuously measure blood oxygen saturation (SpO_2) and heart rate, transmitting real-time readings to a secure IoT dashboard.

Smart Wearable Health Monitoring Bracelet
IoT, Embedded Systems, Biomedical Sensors

Developed a multi-sensor wearable wristband tracking body temperature, heart rate, and steps, establishing an automated alert system for abnormal physiological thresholds.
